

ICT Pro Turf™ with Weed Control

TURF FERTILIZER

THAT PROTECTS AGAINST CRAB GRASS AND BROADLEAF WEEDS
FOR PROFESSIONAL USE ONLY

DIRECTIONS for USE:

10-0-2

Apply 3 to 5 pounds per 1000 sq ft. Only apply to actively growing turf. Apply to a dry recently mowed lawn, using a drop or broadcast spreader. Do not apply near water, storm drains or drainage ditches. Do not apply if heavy rain is expected. Sweep any product that lands in the driveway, sidewalk or street back onto the lawn.

For best results, water lightly after applying if rain is not forecast for 24 hours. Application should be made in early spring before weeds emerge. Apply again in the fall as many broadleaf weeds germinate and establish root systems in the fall.

This product has not been registered by the Environmental Protection Agency. ICT Organics represents that this product qualifies for exemption under FIFRA.
