

TeraVita FA-O is a liquid concentrate that contains 2% active fulvic acids by weight. Fulvic acids are not a plant food. Fulvic acids may increase the availability of micronutrients.

TeraVita FA-O has been thoroughly filtered through a 200-mesh screen and will not clog spray or irrigation equipment.

TeraVita FA-O is compatible with most materials. To be safe, an initial jar test is always recommended when mixing **TeraVita FA-O** with companion materials for the first time.

Keep out of the reach of children

Notice: It is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness, or other unintended consequences may result due to factors that are beyond the control of Organic Approach LLC or the seller. The buyer or user shall assume all such risks.

Warranty Disclaimer: Organic Approach LLC warrants this product conforms to the description on its label and is reasonably fit for the purposes described on its label. In no event shall Organic Approach LLC or the seller be held liable for any incidental, consequential, or special damages resulting from the use or handling of this product. The exclusive remedy of the buyer or user for all claims shall be the return of the purchase price of the product.

Net Contents:

**2½ gallons (9.46 liters)
21.00 lbs. (9.53 kg)**

Description for Use:

Whenever possible, **TeraVita FA-O** should be applied in several smaller-dose applications rather than one larger-dose application. **TeraVita FA-O** may be applied directly to the soil or used with foliar fertilizers.

Soil Applications

For direct soil applications, apply 32 to 64 ounces of **TeraVita FA-O** per acre per application. Apply prior to germination and follow-up with applications every 4 to 6 weeks during the growing season.

Irrigation Applications

For irrigation applications, apply 32 to 64 ounces of **TeraVita FA-O** per acre per application. Applications may be made every 4 to 6 weeks during the growing season.

Foliar Applications

If used with foliar solutions, apply 16 to 32 ounces of **TeraVita FA-O** per acre. The spray concentration should range between 1 ounce of FA-O per 10 gallons of spray and 1 ounce of FA-O per 1 gallon of spray. **If used in conjunction with any herbicide, insecticide, or fungicide, do not exceed 1 ounce of FA-O per 5 gallons of spray, regardless of the total spray volume used or the total amount of FA-O that will be delivered per acre.**

Hydroponics

If used in hydroponic growing, it is best to maintain the nutrient solution so that it contains between 10 and 40 ppm of **TeraVita FA-O** at all times.
